Belden VideoFlex® Snake Cable –FRNC 1855ENx—delivers optimum performance whilst helping to reduce installation and labor costs

Belden offers another innovative new cable designed to provide important benefits. Belden VideoFlex® FRNC 1855ENx is the latest extension of the highly popular range of VideoFlex® Snake Cables.

Like all products in the range, this cable has extremely good signal transmission and performs at higher frequencies for digital applications (SD/HD). However, it can also be used at lower frequencies such as for analog applications.

This new cable has benefits for all types of users, ranging from video installer to expert media installers (such as for large screen visualization, conferences and events) and from system integrators to large screen, LED and LCD display solution manufacturers, in fact anyone who is looking for the very best performance.

Some of the benefits and features include:

- The solid copper center conductor
- High velocity, low-loss PE – means low attenuation, long distances and improved timing
- Foil under braid shielding
- Cables have a Minimum Return Loss of 24dB at all frequencies up to 1500 MHz
- The coaxes are pre-timed to less than 4.0 ns/m delay difference between each coax
- It is cold flexible up to -40°C
- It can be used inside or out and is UV resistant
- Color-coded coaxes provide easy identification
- Bundled halogen-free coax cables are notoriously stiff and difficult to strip for termination, especially when rated for IEC 332-1 use. This cable overcomes these problems because it is designed with flexible halogen-free plastic (rated IEC: 60332-1) – with the added advantage of no toxic gases and low smoke density
- Cable jackets are meter-marked – for tracking during installation.

Belden® New Generation® Waterdog™ Cables Offer Water Resistance in Direct Burial Applications

The Belden line of New Generation Waterdog Cables includes paired, multi-conductor and coaxial cables that meet the water-resistant standards set by UL 444, UL 13, and the TIA 455-82B Water Filtration Test.

The ruggedly constructed Waterdog cables can be installed indoors or out, above or below ground, making it practical for building management systems to be connected seamlessly – from building to building or, for example, from remote surveillance camera sites to indoor security monitors.

The user-friendly Waterdog cables are also ideal for deployment in standard indoor/outdoor building management installations, including:

- Power limited fire alarm circuits
- Intercom, audio and sound systems
- CCTV surveillance and access control systems
- CATV and distributed video systems
- Background music and 'white noise' systems

The New Generation Waterdog line features best-in-class construction, resulting in best-in-class performance and reliability.

Belden Waterdog cables are available from stock and all cables carry Belden's industry-leading 10-year warranty.

Maser (UK) can now offer Dekoron Wire and Cables

Dekoron are the Instrumentation experts in the Wire and Cable industry. They are also the market leader in the design, manufacture and supply of multi-pair instrumentation, control, and thermocouple extension cables to meet all International industry standards.

Dekoron have developed thousands of variations of instrument wire and the superior specifications of Dekoron cable feature 300V & 600V voltage rating, direct burial, heat and fire resistant cables. Conductor sizes range between 0.5mm², 1.5mm², 2.5mm² & 4mm, and types from 1 pair up to 100 pairs are standard.

Special manufacturing techniques also allow custom cable designs from as little as 300 metres to 3000m in continuous lengths, and provide economic solutions to meet customer specific requirements. Dekoron are also renowned to offer some of the shortest manufacturing lead-times in the industry (generally 3 to 4 weeks ex works).

Dekoron products are used in large scale industrial control systems in industries including:

- Oil refining
- Petrochemicals
- Mining & Exploration
- Water Treatment Plants
- Oil & gas production & processing
- Power generation
- Chemicals
- Paper
- Steel & metal processing
- Bio Fuels

Maser, would welcome the opportunity to quote your requirements, especially non-standard special instrumentation enquiries.

Maser UK Online Cable Sales Website

Maser Communications (UK) Ltd has a new online cable website www.masercable.com

The Masercable website is designed as a free online resource, assisting customers to find exactly what they are looking for, whether it is a specific product, a product range, or just information on Maser's suppliers.

This new website allows customers to search for products by manufacturer, part number or just by the type of product.

Up to date product news and industry news, as well as monthly special product offers are also included on the website.

www.masercable.com is a quick, easy solution to solving your cable requirements, take a look today!

In Brief

- Belden has recently launched their new full European catalogue. To download this catalogue go to www.masercable.com
- Maser is attending **IBC 2007** (RAI Convention Centre, Amsterdam) with Belden on 7th-11th September
- **Receive your newsletters by email rather than post!** Write an email to sales@masercomms.co.uk with "change to email" in the subject
- If you think a colleague would like to receive copies send their details to sales@masercomms.co.uk
